

# Soroban Block Explorer - Milestone 2 Evidence

Project: Soroban Block Explorer

Team: Rumble Fish

Deliverable: Milestone 2 - Complete API + Frontend

This document accompanies the Milestone 2 verification video and maps the approved acceptance criteria to concrete evidence from the deployed API and React frontend.

## 1. Executive Summary

Milestone 2 delivers the public explorer application and complete REST API for Stellar mainnet data. The React SPA is deployed at:

<https://sorobanscan.rumblefish.dev>

The API is available through the Cloudflare-fronted host:

<https://api-sorobanscan.rumblefishdev.com/v1>

The API reads from the project's own indexed mainnet datastore in ClickHouse. The frontend renders live data for transactions, ledgers, accounts, contracts, assets, NFTs, liquidity pools, and search. Soroban invocations and CAP-67 events are decoded into readable fields rather than exposed only as raw XDR.

## 2. Approved Deliverable

Deliverable 2 - Complete API + Frontend:

All REST API endpoints live and serving mainnet data: transactions (list + detail), ledgers (list + detail), accounts (detail + history), contracts (detail + invocations + events), assets, NFTs, liquidity pools, search (exact match + prefix). React SPA deployed via CloudFront with all pages. Rate limiting and response caching configured on API Gateway.

Acceptance criteria:

1. All API endpoints return schema-valid responses for mainnet entity IDs provided by the reviewer.
2. For at least 3 known contract transactions, the decoded invocation detail - function name, arguments, and return value (not raw XDR) - is reachable from the contract's Invocations tab via the linked Transaction Detail Advanced view.
3. CAP-67 events appear on Transaction Detail page under Events tab with decoded topics and data fields (not raw XDR).
4. Global search redirects to correct detail page for an exact transaction hash, account ID, and contract ID.
5. React frontend publicly accessible at staging URL; all pages render live mainnet data.

## 3. Live Endpoints and Reviewer Access

| Resource     | URL / Access                                                                                                                  |
|--------------|-------------------------------------------------------------------------------------------------------------------------------|
| Frontend     | <a href="https://sorobanscan.rumblefish.dev">https://sorobanscan.rumblefish.dev</a>                                           |
| API base     | <a href="https://api-sorobanscan.rumblefishdev.com/v1">https://api-sorobanscan.rumblefishdev.com/v1</a>                       |
| Swagger UI   | <a href="https://api-sorobanscan.rumblefishdev.com/api-docs">https://api-sorobanscan.rumblefishdev.com/api-docs</a>           |
| OpenAPI JSON | <a href="https://api-sorobanscan.rumblefishdev.com/api-docs-json">https://api-sorobanscan.rumblefishdev.com/api-docs-json</a> |
| API access   | Gated (x-api-key header); demonstrated live in the verification video                                                         |

The API is access-controlled. Its endpoints and responses are demonstrated end-to-end in the submission video; an **API key is available to reviewers on request** if they wish to run the calls themselves. No key is embedded in this document.

## 4. Architecture Evidence

The Milestone 2 read path is:

1. ClickHouse datastore with indexed Stellar mainnet data.
2. Rust API Lambda, implemented with axum and utoipa.
3. API Gateway and Cloudflare edge for access control, rate limiting, and caching.
4. React SPA deployed through CloudFront.

Evidence image:

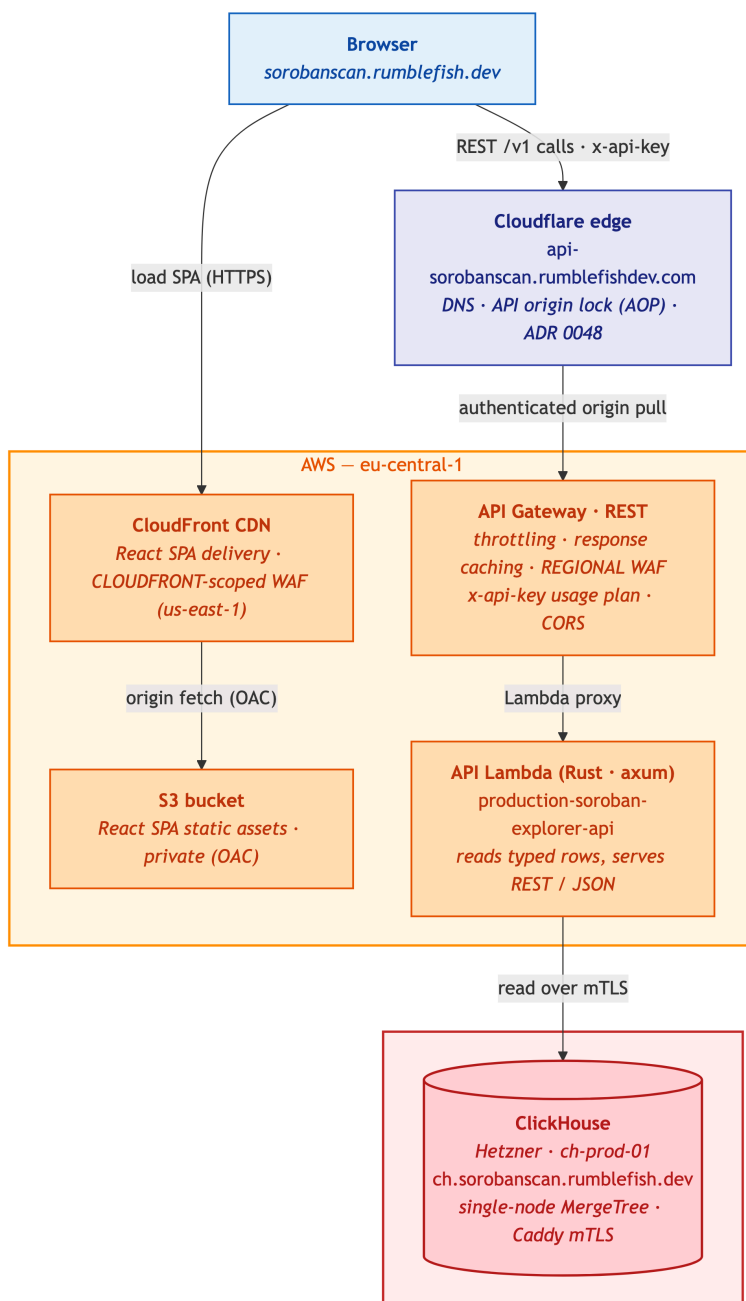

Figure 1 — Milestone 2 read path. Static SPA delivery (Browser -> CloudFront -> S3) and the data path (Browser -> Cloudflare edge -> API Gateway -> API Lambda -> ClickHouse). The ingestion / write path is covered separately in the Milestone 1 evidence.

## 5. Acceptance Criteria Evidence

### AC1 - Schema-valid API responses

Mainnet entity IDs used for the run (abbreviated for layout; full IDs in the verification commands below):

| Entity            | Value                                               |
|-------------------|-----------------------------------------------------|
| Ledger sequence   | 63300000                                            |
| Transaction hash  | 4f6993de...4178b984 (full in verification commands) |
| Account ID        | GA6G524Y...QSIAJ30                                  |
| Contract ID       | CDL74RF5...VMFAIGWA (KALE farm)                     |
| Asset ID          | EURC - GDHU6WRG...ITNPP2                            |
| NFT contract ID   | CCA0CYAL...7B2YPKS                                  |
| NFT token ID      | 8                                                   |
| Liquidity pool ID | LCSGRVA5...4PMAIQQUG                                |

Representative endpoint coverage (all return HTTP 200 with schema-valid JSON; full captured responses in the evidence package, milestone-2-real-endpoints-responses.md):

| Endpoint                                          | Result |
|---------------------------------------------------|--------|
| GET /v1/ledgers                                   | 200 OK |
| GET /v1/ledgers/63300000                          | 200 OK |
| GET /v1/transactions                              | 200 OK |
| GET /v1/transactions/4f6993de...4178b984          | 200 OK |
| GET /v1/accounts/GA6G524Y...QSIAJ30               | 200 OK |
| GET /v1/accounts/GA6G524Y...QSIAJ30/transactions  | 200 OK |
| GET /v1/contracts/CDL74RF5...VMFAIGWA             | 200 OK |
| GET /v1/contracts/CDL74RF5...VMFAIGWA/invocations | 200 OK |
| GET /v1/contracts/CDL74RF5...VMFAIGWA/events      | 200 OK |
| GET /v1/assets                                    | 200 OK |
| GET /v1/assets/EURC - GDHU6WRG...ITNPP2           | 200 OK |
| GET /v1/nfts                                      | 200 OK |
| GET /v1/nfts/CCA0CYAL...7B2YPKS/8                 | 200 OK |
| GET /v1/liquidity-pools                           | 200 OK |
| GET /v1/liquidity-pools/LCSGRVA5...4PMAIQQUG      | 200 OK |
| GET /v1/search?q=GA6G524Y...QSIAJ30               | 200 OK |

Verification commands (demonstrated live in the video; API key provided to reviewers on request, not embedded here):

API=https://api-sorobanscan.rumblefishdev.com/v1

KEY=<API\_KEY> # provided on request

```
curl -sS -H "x-api-key: $KEY" "$API/ledgers/63300000" | jq .
curl -sS -H "x-api-key: $KEY" "$API/

```

Representative responses (schema-valid):

GET /v1/ledgers/63300000:

```
{
  "sequence": 63300000,
  "hash": "99edd7a94468775367fb767404094c3b75f2293ceddda8f38b45cde26327a7db",
  "closed_at": "2026-07-02T20:36:34Z",
  "protocol_version": 26,
  "transaction_count": 302,
  "base_fee": 100
}
```

GET /v1/assets/EURC-GDHU6WRG...ITNPP2:

```
{
  "id": "EURC-GDHU6WRG4IEQXM5NZ4BMPK0XHW76MZM4Y2IEMFDVXBSDP6SJY4ITNPP2",
  "asset_type_name": "classic_credit",
  "asset_code": "EURC",
  "issuer": "GDHU6WRG4IEQXM5NZ4BMPK0XHW76MZM4Y2IEMFDVXBSDP6SJY4ITNPP2",
  "sac_contract_id": "CDTKPWPLOURQA2SGTKTUQ0WRCBZE0RB4BWBO MJ3D3ZTQQSGE5F6JBQLV",
  "sac_deployed": true,
  "decimals": 7,
  "total_supply": "41000089363667",
  "holder_count": 4441
}
```

GET /v1/liquidity-pools/LCSGRVA5...4PMAIQUG (XLM / USDC):

```
{
  "pool_id": "LCSGRVA5R2NY6PDSBFSRMCFXJN63PLEZKL0K4DG7ESDR2HM4PMAIQUG",
  "asset_a": { "asset_type_name": "native" },
  "asset_b": { "asset_type_name": "credit_alphanum4", "asset_code": "USDC",
    "issuer": "GA5ZSEJYB37JRC5AVCIA5M0P4RHTM335X2KGX3IH0JAPP5RE34K4KZVN" },
  "fee_bps": 30, "fee_percent": "0.3",
  "participant_count": 330,
  "reserve_a": "11865343.1320615",
  "reserve_b": "2381566.8329882",
  "total_shares": "3997972.8712451",
  "latest_snapshot_at": "2026-07-03T10:48:44Z"
}
```

Result: all listed endpoints return HTTP 200 with schema-valid JSON for the mainnet entity IDs above.

## AC2 - Decoded Soroban invocations

The contract's **Invocations** tab (on Contract Detail) is an index of the contract's invocation appearances - transaction hash, caller, status, ledger, time. Per-call detail is XDR-only at that index layer (ADR 0034), so each row links to the transaction that made the call. The **decoded** invocation detail - function name, arguments, and return value (ScVal-decoded, not raw XDR) - is shown on the linked **Transaction Detail** page under the **Advanced** view, and is served by the transaction-detail (decoded-operation) API.

Reviewer navigation:

Contract Detail -> Invocations tab -> open a transaction -> Transaction Detail -> Advanced

Pages / API:

| Surface                                          | URL / endpoint                                                                                                                                        |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| Contract (invocations index)                     | <a href="https://sorobanscan.rumblefish.dev/contracts/CDL74RF5...VMFAIGWA">https://sorobanscan.rumblefish.dev/contracts/CDL74RF5...VMFAIGWA</a>       |
| Transaction (decoded call detail, Advanced view) | <a href="https://sorobanscan.rumblefish.dev/transactions/e584ff2d...687b65c9">https://sorobanscan.rumblefish.dev/transactions/e584ff2d...687b65c9</a> |
| API (decoded operation)                          | GET /v1/transactions/e584ff2d...687b65c9                                                                                                              |

The contract (GET /v1/contracts/CDL74RF5...VMFAIGWA) reports **16,984,366 invocations by 6,500 unique callers over 7 days**. The Invocations tab is the appearance index (tx hash / caller / status / ledger / time):

```
{ "data": [
  { "transaction_hash": "e584ff2d5c548b6302fba03354ca9a9f2fa13e3e133ea79db20c7eb2687b65c9",
    "caller_account": "GBME3YR3P3AG4BHZ4AZZQIVFZCSQYVVJJIUZ06ZXI20EH2VMDFTK6Y7AX",
    "ledger_sequence": 63310022, "successful": true, "created_at": "2026-07-03T12:42:31Z" }
]
```

Evidence set (three known contract transactions, all function plant):

1. e584ff2d5c548b6302fba03354ca9a9f2fa13e3e133ea79db20c7eb2687b65c9
2. 97073c3121861dfc457bdee1353f69b864d265aef8a6e01026f64fb12f6ab84e
3. e5f56501b97cad1c350648ab3867f1fd19e78d4f6c649ff64388acc23f039f4d

For each, GET /v1/transactions/<hash> returns the **decoded operation** under heavy.operations[].details — the ScVal-decoded function name, typed arguments, and return value (not raw XDR). Example (tx 1, e584ff2d...687b65c9):

```
{
  "op_type": "INVOKE_HOST_FUNCTION",
  "details": {
    "contractId": "CDL74RF5BLR2YBLCCI7F5FB6TPSCLKEJUBSD2RSVWZ4YHF3VMFAIGWA",
    "functionName": "plant",
    "hostFunctionType": "invokeContract",
    "functionArgs": [
      { "type": "address", "value": "GBME3YR3P3AG4BHZ4AZZQIVFZCSQYVVJJIUZ06ZXI20EH2VMDFTK6Y7AX" },
      { "type": "i128", "value": "0" }
    ],
    "returnValue": { "type": "void", "value": null }
  }
}
```

Result:

For at least three known contract transactions, the Transaction Detail Advanced view (reached from the contract's Invocations tab) shows the decoded function name, arguments, and return value - not raw XDR - and the transaction-detail API returns the same decoded operation data.

### AC3 - Decoded CAP-67 events on Transaction Detail

Transaction page:

<https://sorobanscan.rumblefish.dev/transactions/e584ff2d...687b65c9>

API endpoint (full hash):

GET /v1/transactions/e584ff2d5c548b6302fba03354ca9a9f2fa13e3e133ea79db20c7eb2687b65c9

Evidence:

| Item                     | Value                                                     |
|--------------------------|-----------------------------------------------------------|
| Transaction hash         | e584ff2d...687b65c9 (full in verification commands)       |
| Contract emitting events | CAS3J7GY...H34X0WMA (native XLM Stellar Asset Contract)   |
| API output               | heavy.contract_events + heavy.diagnostic_events — decoded |

The transaction-detail API returns CAP-67 events decoded into typed topics and data (not raw XDR). Example **contract event** — a fee charge emitted by the XLM SAC (topics: symbol + address; data: i128 amount):

```
{
  "event_type": "contract",
  "contract_id": "CAS3J7GYLGXMF6TDJBBYYSE3HQ6BBSMLNUQ34T6TZMYMW2EVH34X0WMA",
  "topics": [ { "type": "sym", "value": "fee" },
               { "type": "address", "value":
"GA2JRQ0F6EA3HQWDCEDBPPMLYPJCFLDDGYZLEQGMS5S0BQIB3BAFHVAW" } ],
  "data": { "type": "i128", "value": "288790" }
}
```

The Events tab renders these decoded events (typed topics/data); its count badge reflects the *recent* (7-day) window while the tab lists the full decoded history.

Result:

The Transaction Detail page decodes CAP-67 event topics and data into readable, typed fields (sym / address / i128 / ...), and the transaction-detail API returns the same decoded event data.

### AC4 - Global search redirects

Evidence:

| Search input                   | Expected route                    | Evidence         |
|--------------------------------|-----------------------------------|------------------|
| 4f6993de...4178b984 (tx hash)  | /transactions/4f6993de...4178b984 | routes correctly |
| GA6G524Y...QSIAJ30 (account)   | /accounts/GA6G524Y...QSIAJ30      | routes correctly |
| CDL74RF5...VMFAIGWA (contract) | /contracts/CDL74RF5...VMFAIGWA    | routes correctly |

Result:

Exact global search redirects to the correct detail page for a transaction hash, account ID, and contract ID.

### AC5 - Public React frontend with live mainnet data

Frontend URL:

https://sorobanscan.rumblefish.dev

Evidence — each page below renders live mainnet data (full-size files also in screenshots/):

The screenshot shows the Soroban Scan homepage. At the top, there's a navigation bar with links: Transactions, Accounts, Ledgers, Assets, Contracts, NFTs, and Liquidity Pools. The main header features the Soroban Scan logo and the text "Soroban - first. Stellar - complete." Below this, a subtitle reads "Built for the Soroban era — smart contracts, payments, NFTs, liquidity pools, all decoded." A search bar is present with the placeholder "Search by TX hash, accounts, contract, token". The main content area displays four key statistics: "LIVE" with a value of 63,310,577 (Current ledger), "TPS" with a value of 65.9 (Last 60s), "Accounts" with a value of 24,665,475 (Total), and "Contracts" with a value of 151,316 (Soroban). Below these statistics, a section titled "Latest transactions" shows a list of transactions. The first transaction is highlighted with a green "Success" status.

| Hash          | Source account | Operation       | Status  | Time                              |
|---------------|----------------|-----------------|---------|-----------------------------------|
| 881619...73eb | 6BZ3...ETSY    | Invoke Contract | Success | 4s ago<br>2026-07-03 13:36:25 UTC |

Home

The screenshot shows the "Transactions list" page on Soroban Scan. The top navigation bar includes the Soroban Scan logo and links: Transactions, Accounts, Ledgers, Assets, Contracts, NFTs, and Liquidity Pools. The page title is "Transactions list" with a subtitle "All indexed transactions on the Stellar network". A search bar and a dropdown menu for "All operation types" are at the top. Below, a table lists transactions with columns: Hash, Ledger, Source account, Operation, Status, Fee, and Time. The first transaction is highlighted with a green "Success" status.

| Hash          | Ledger     | Source account | Operation       | Status  | Fee           | Time                               |
|---------------|------------|----------------|-----------------|---------|---------------|------------------------------------|
| 881619...73eb | 63,310,577 | 6BZ3...ETSY    | Invoke Contract | Success | 0.0014456 XLM | 14s ago<br>2026-07-03 13:36:25 UTC |
